(Received: September 28, 1998)

**SUMMARY:** In this paper we present precise astrometric positions of four comets and four minor planets from the MPC critical list. All the observations were carried out with CCD equipped Askania astrograph (13.5/160). The SBIG ST-8 camera was used. Comet 1998 M5 (Stonehouse) occulted an anonymous star on July 9 and that phenomenon was observed successfully.

The following list contains precise astrometric positions of comets 1998 H1 (Linear), 1997 J2 (Meunier-Dupouy), 1998 K5 (Linear) and 1998 M5 (Linear). The minor planet 1036 Ganymed and newly-discovered objects 1998 FX2, 1998 FM5 and 1998 MK30 were observed too. Some more details about the method of observation and reduction were pub-

lished in one of our previous papers (Protitch-Benishek and Benishek, 1998).

Table 1 contains the comet designations, time in UT and the topocentric coordinates Alpha and Delta for the Equinox 2000.0.

Table 2 presents precise astrometric CCD positions of the minor planets from the MPC critical list. The same designations are used in this Table.

**Table 1.** Positions of comets

У раду су приказани астрометријски положаји четири комете и четири мале планете са MPC списка. Сва посматрања су изведена са Askania астрографом (13.5/160) опремље-

ним CCD SBIG ST8 камером. Успешно је посматрана окултација једне звезде са кометом 1998 M5.
