Virtual Observatory tools and services

Evanthia Hatziminaoglou
EURO-VO Facility Centre Astronomer
ESO-Garching

VO tools and services

VO tools offer a variety of functionalities:

- data discovery / data mining
- cross correlation
- spectra visualisation
- catalogue/table manipulation
- image handling
- plotting

SAMP: a messaging protocol allowing various tools to communicate with each other

Data Discovery	Spectral Analysis	Data visualisation and handling	SED building and fitting	Cross-correlation	Footprints

Server status report

CADC

```
Description    : Canadian Astronomical Data Center (CADC)
Type           : Image
More info      : http://www.cadc.hia.nrc.gc.ca/cadc/
Last query     : http://www.cadc-ccda.hia-iha.nrc-cnrc.gc.ca/ivoa/CADC/siapQuery?POS=4
Status         : Ok
Identifier     : CADC

The Canadian Virtual Observatory (CVO) provides this SIA server access for some CADC
archives (decompose mosaic images into single extension FITS files , cutout of the
region-of-interest when it is smaller than the image, WCS correction of returned
FITS files.

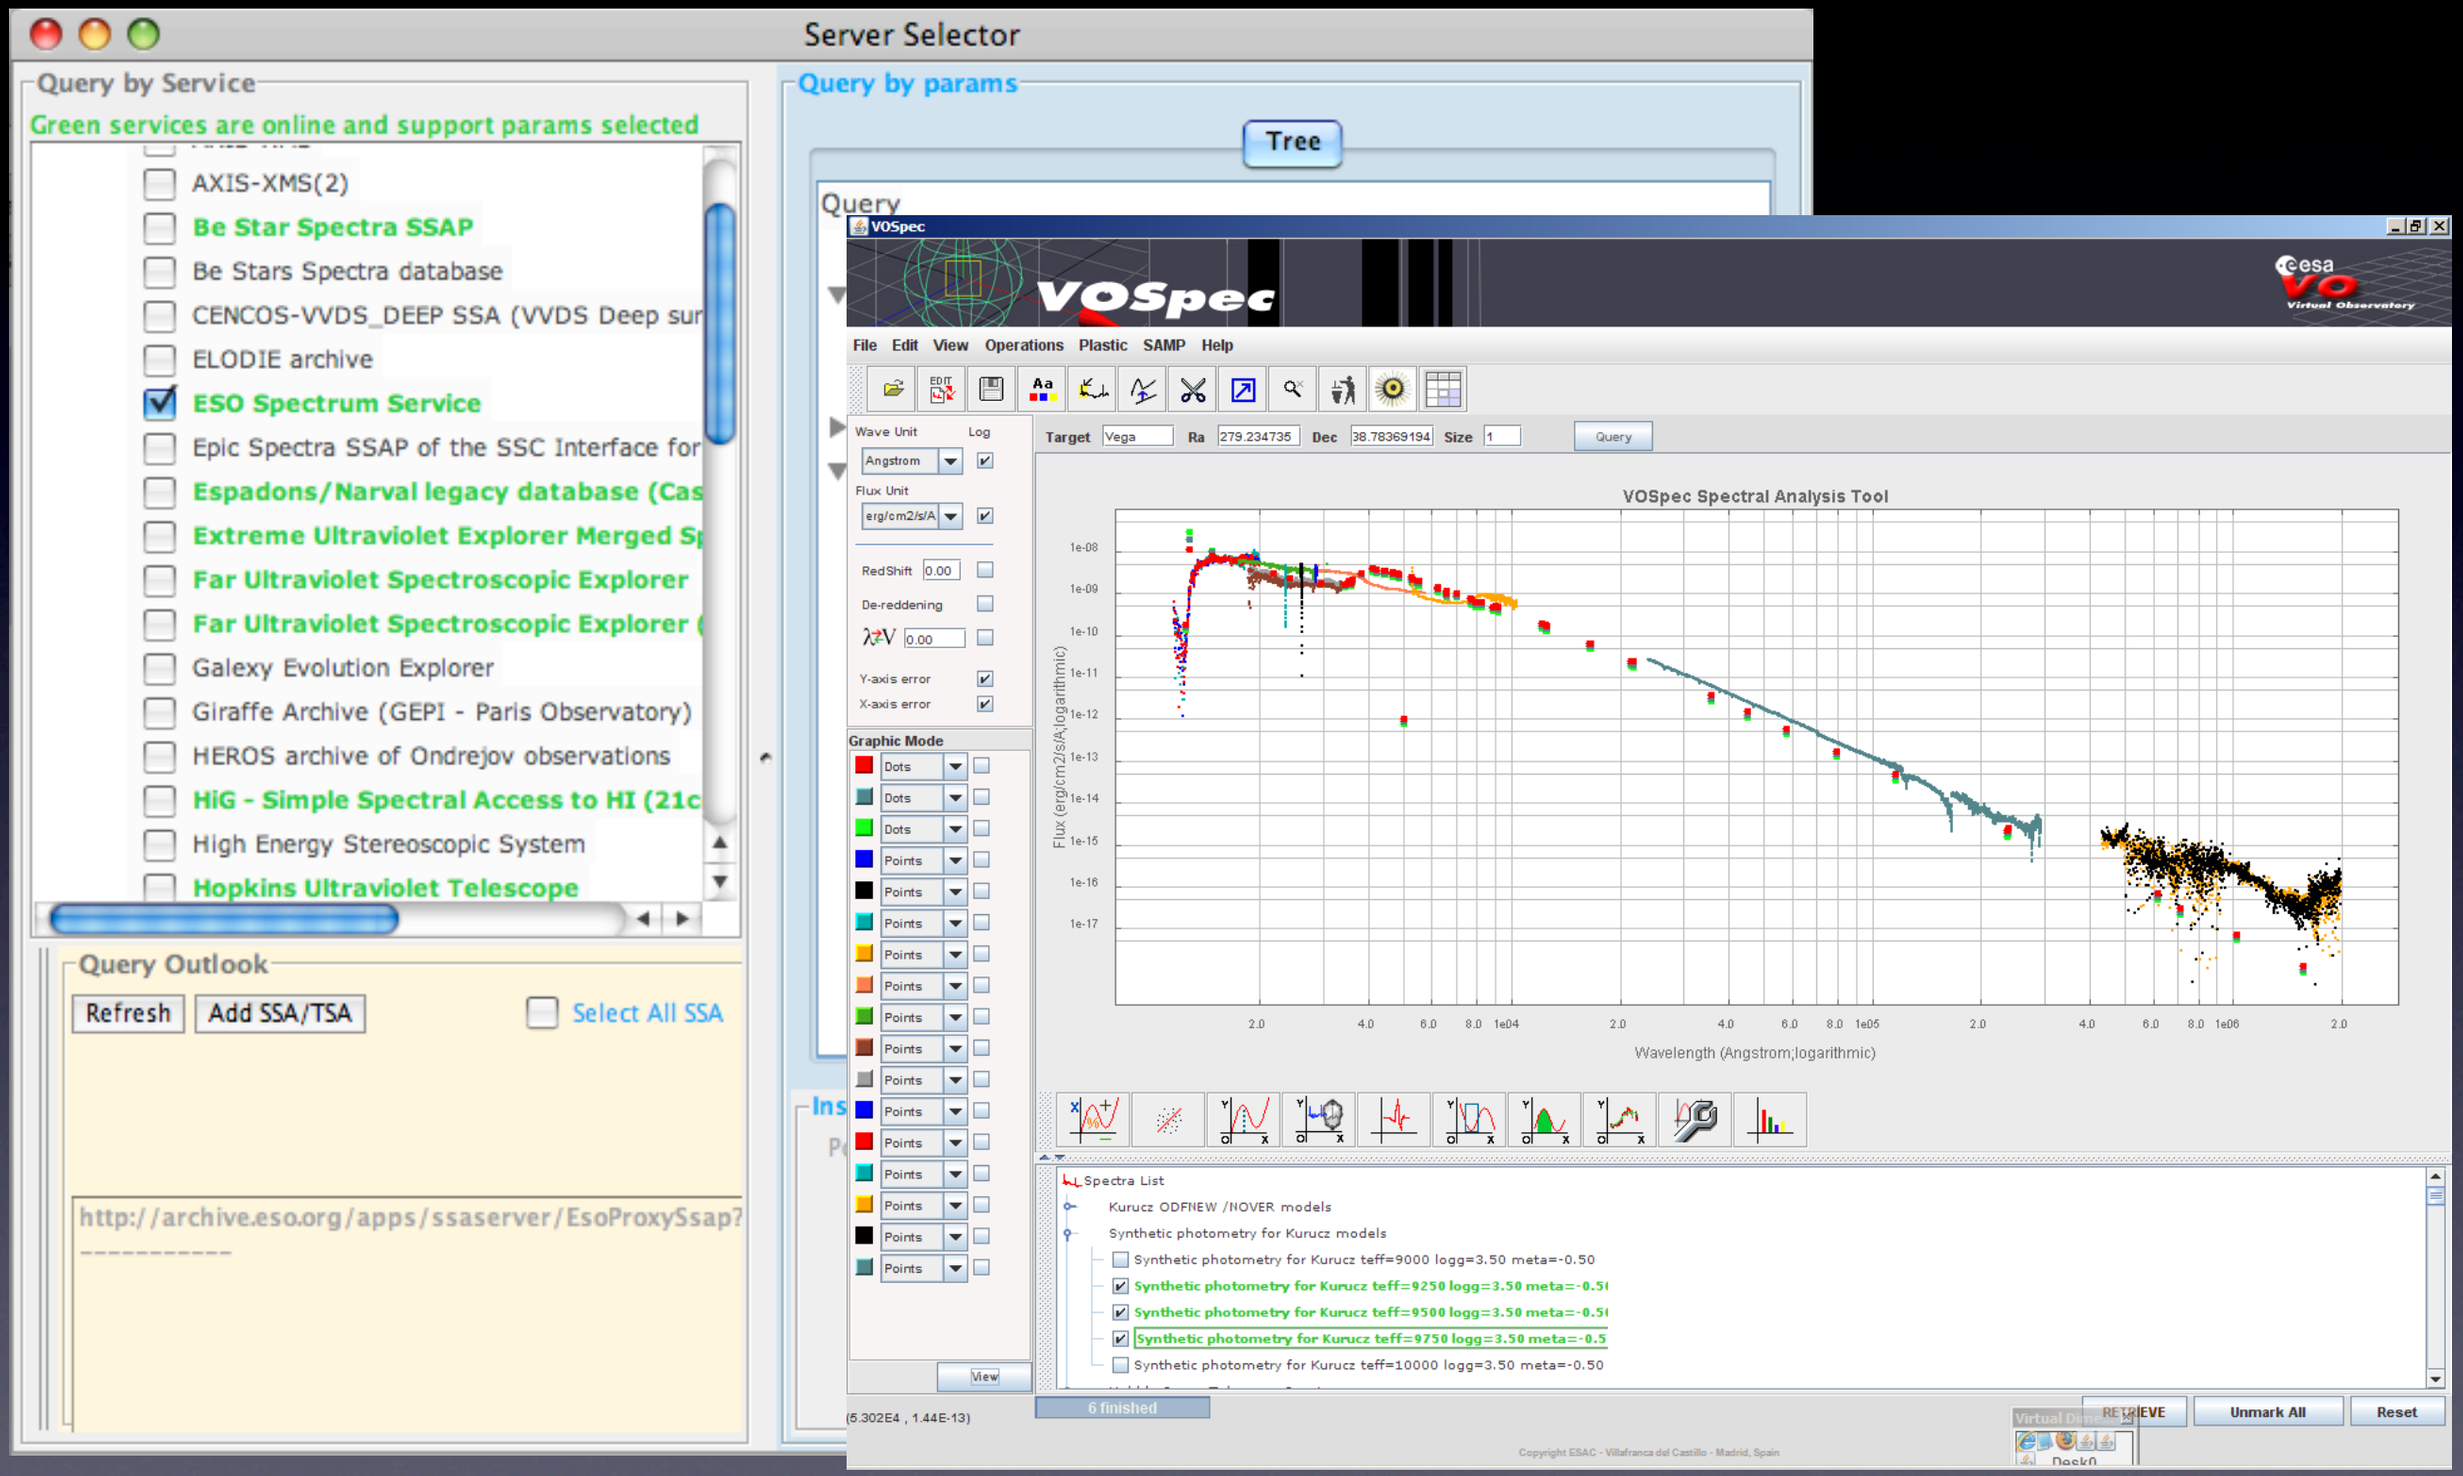
VOSpec, SPLAT, Specview - the spectral analysis tools



SPLAT-VO and Specview offer similar data access and similar analysis functionalities

Scripting

e.g. Astro Grid

untitled

```
1  # Import some functions
2  from astrogrid import ConeSearch
3  from astrogrid import sesame
4
5  # Query name resolver and get coordinates
6  s=sesame()
7  coords, ra, dec = s.resolve('M51')
8
9  # We are going to query the NED database
10 cone = ConeSearch("ivo://
11
12 # Perform the query
13 vot = cone.execute(ra,dec
14
15 # Print the result
16 print vot
17
18 # or save it
19 open('result.vot', 'w').w
```

Line: 1 Column: 1 Python Tab Size: 4

Complete Examples

The following links provide complete scripts which perform the described action. You can copy paste form the pages or download all the scripts from the tar file linked at the bottom.

- Search a catalogue for sources in a number of positions
- Search a catalogue for sources in a number of positions (parallel version)
- Search for images covering selected objects or areas
- Cross Match tables (NED, 2MASS, SDSS, UKIDSS)
- Submit an ADQL query to UKIDSS DR1
- Cross Match two tables returned by ADQL queries (IPHAS + 2MASS)
- Convert between file formats (eg. VOTABLE to FITS)
- Extract objects from images using SExtractor

These and other Python scripts are available as a tar file: python.tar.gz.

- ColourCutter: Crossmatch catalogue data selected by colour (FIR to optical)

http://www.astrogrid.org/wiki/Help/IntroScripting/AstrogridPython

but also:

- Aladin macros
- STILTS
